

Hello everyone! Here's the latest from PML...

We're proud to announce another addition to our lineup of electronic devices, the Transolve ST-2 Staging Timer! The ST-2 is perfect for our two-stage kits like the Quantum Leap or Thunder 'n' Lightning, or also for airstarting motors in cluster projects. Here's the list of features (and don't miss that comment about the PML-exclusive instructions...we pride ourselves in providing very thorough instructions with all products you buy from PML).

Features:

- Adjustable time to firing of 1-12 seconds after launch.
- Onboard sensor requires 2.1-G acceleration for 0.75 seconds to indicate launch
- Uses common 9v alkaline battery for up to 1 amp output; 9v NiCad battery for up to 5 amps output (battery not included).
- Includes 5-amp rated output safing toggle switch
- Fits inside PML PT-1.52 tubing; will fit in PML CT-1.52 with minor sanding of battery holder
- L: 3.0", W: 1.25", H: 1.0"; 2.5 ounces with 9v alkaline installed
- Includes detailed PML-exclusive instructions
- One year warranty

The ST-2 is \$62.95, including a high-current (5-amp) rated safing switch. We've got plenty in stock, so if you've been looking for a two-stage timer or an airstart device, now you've found it! Also, FYI, we've added some digital images of our PML P5 altimeter and the On/Off switch and wiring harness included with it to the site as well. Find both the ST-2 and the P5 images in the Electronics button in the Webstore.
