

Hi everyone. A real quickie this time for RockSim 4.0 users. I've made some enhancements to the Quantum Leap RockSim files, and have attached them here. (They're really small files, which is why I just attached them). Please replace the Quantum Leap files you have on your system with these (the file names are the same so just overwrite the files you have now with these and you'll never mistakenly pull up the old ones).

If you haven't downloaded the RockSim files yet from the website, the new Quantum Leap files have been placed in the PML Kits file there, so you'll get the new ones if you download the whole file set from the website.

Also, FYI, we've posted the latest KitSpecs and Motor Recommendations chart on the website. That's it!
