

Hello, everyone. Hope you're gearing up for another good flying season as the good weather approaches. Today I have a few items to announce to you...

First, we now have 3.9 QT available in 48" lengths! This will be good news for those of you who have always wanted airframe a bit longer than the standard 36" in the 3.9" diameter. Unlike our announcement a few weeks back about the availability of 3.9 x 48" Phenolic tubing (which we still have available for a short time), the 3.9 x 48" QT is a standard stock item, not a "one time only" offer. See the Airframes section of the website for specs on the tubing and to order.

Next is the availability of a PDF on our Recovery page showing you how we recommend tying Tubular Nylon shock cords. In the past we've recommended using the Bowline knot, which is still just fine. However, we've found a new knot that's easier to use and also results in a "cleaner looking" finished knot. You'll find a link on the Recovery page right below the page header.

We've also added a button to our front page describing our participation in the Rockets For Schools program, a great program that works with students through Space Education Initiatives, Inc. to teach them about construction and flying of high power rockets. This may be of interest to some of you to steer that budding young rocketeer into a mentored program. There's a link on our page for more information.

Lastly, just wanted to remind everyone that we regularly update our Frequently Asked Questions document on the FAQ page of the site. This doc has lots of great information in it, from detailed descriptions and usage tips for our components and systems to custom work to finishing tips, and much more. If you haven't looked at it lately, check it out...there's bound to be some good new information in there for you!

Thanks again for your great support of PML. The new flying season will also bring some new products and kits from us...as subscribers to our Newsletters service, you can be sure you'll be the first to know!
