

Hello everyone! It's been quite a while, but here's a quick announcement for you...

We now offer the popular Daveyfire N28BR Electric Matches for ejection charge ignition by electronic devices. These electric matches are typically used with altimeters, accelerometers, timers, and other devices to ignite black powder to eject parachutes. The Daveyfires work great with our CPR systems, whether original CPR, CPR2000 or CPR3000, or scratchbuild systems alike. Go to our Igniters Page on the website for LOTS more information and to order. (The Daveyfires aren't really Igniters, as is explained in the text on the Igniters Page labeled "Ematches vs. Igniters", but it seemed the most logical place to put them).

Also, we've revised our FAQ on the FAQ Page of the site. As always, the newest information in the FAQ is highlighted in yellow to make it convenient for you to see what's new.

One last thing...with our Thrusters Rocket Motors, the Magnelite Igniter Kits, the PML Rapidfire Igniters and the new Daveyfire Ematches, there are some rules and regulations regarding shipping, HazMat charges, etc. We've summarized all the different products and ways you can choose to have them shipped to you, and the requirements surrounding those choices, on the entry page of our webstore. When you go to our website at www.publicmissiles.com and click on the Webstore button, you're presented with a page where you can view or download our most recent price list, etc. Well, about half-way down that page you'll see a link to click on to view the new chart.

Thanks again for your support of PML!
