

PML Announces CPR-MAX 6.0" and 7.5" Electronic Recovery

PML is pleased to announce the availability of our CPR-MAX dual recovery system. Our industry-first CPR electronic dual recovery system has been upgraded and improved continuously throughout the years in 2.1-3.9" sizes, with the latest being the third-generation CPR3000. We've now "ported over" that CPR3000 system technology to another industry first, the 6.0" and 7.5" CPR-MAX system.

The CPR-MAX system is a complete system (less the altimeters and ejection charges, of course) that features twin/redundant altimeters as standard equipment! This makes it super-easy to design in the redundant altimeter recovery required for Level 3 flights, or just to fly a second altimeter as a safety backup for sport flying. (NOTE: the second altimeter is NOT required for CPR-MAX. It is a feature, not a requirement, to use a second altimeter).

CPR-MAX is also available as an upgrade to our 6.0" Ultimate Endeavour kit and our 7.5" 1/2-Scale Patriot kit. We've also priced CPR-MAX at 10% off regular price when ordered as an upgrade with those two kits! (The fullsize Pterodactyl and the Bulldog would both require at least 2 feet of airframe to be added to them to use CPR-MAX, so we don't offer it as an upgrade to those kits since most people wouldn't want to change the look of the kits that much).

See the CPR Systems page at www.publicmissiles.com for more information.
