

## PML News – Volume 67 (07/22/06)

Just weeks after the release of our new MR-1 and AGM-256 PitBull rocket kits, we are pleased to announce the “big brother” to the AGM-256, the AGM-600 PitBull! And when we say big brother, we mean BIG! At 79” tall, 6” in diameter, and with a 54mm motor mount, the AGM-600 PitBull is one impressive rocket!

This huge kit comes complete with fiberglass nosecone and boattail, and the 54mm motor mount can handle motors up to about 30” long. Recovery is via motor ejection deploying an 84” chute.

Even though this is a large rocket, its simple design is easy to build and easy to fly. The AGM-600 is a *perfect* Cert 2 rocket, and also makes for great demo flights! We’ve already updated our website with the -600’s RockSim file and have upgraded both the KitSpecs chart and our Motor Recommendations charts (on the Specs Page of the site) to help you decide what monster motor to fly ‘er on!

The AGM-600 can be ordered on the Advanced 6” Kits page of the webstore at [www.publicmissiles.com](http://www.publicmissiles.com). (It’s lil’ bro, the AGM-256, is on the Scale page). Check ‘em out today!
