

PML News Volume 70 – HAMR Motor Retention System

Public Missiles Limited (PML) has developed our own line of high quality, threaded motor retainers! The H.A.M.R. (Highly Adaptive Motor Retainers) system has been designed specifically for use with PML rocket kits or any scratch-built rocket using PML motor tubes. These lightweight, tool-free, threaded retainers are precision CNC-turned from 6061 aluminum and anodized. PML offers a HAMR system for standalone/single-diameter motor mounts, and a HAMR system for PML's popular Kwik-Switch 54/28/29mm motor mount system.

These retainers fit virtually all popular motor brands and types, including Aerotech RMS™, CTI Pro XX™, Animal Motor Works™, Hypertech™, Kosdon™, Sky Ripper™, Loki™, and others.

The HAMR system can be adapted to existing rockets if the motor tube extends at least 3/8" beyond the aft centering ring. The HAMR can also be used with boattail and tailcone rockets.

Goto www.publicmissiles.com, enter the Webstore, then go to the Hardware page for more information on the HAMR system. It's HAMR Time!
